

Correction: I forgot to put N in my visited order. It should be:  
ABDJKELFNOCGPQ

Note: I followed a youtube video called "alpha beta pruning example" by Subbarao Kambhampati, which can be found at the following link:  
<https://www.youtube.com/watch?v=Ewh-rF7KSEg>

I didn't use alpha or beta, because that method was way too confusing. Subbarao's method of DFS, followed by a simple comparison, proved to be significantly less confusing, which I believe led to far fewer mistakes than I made using the method from the video shown in class... plus, it's much quicker to do.

If you would like me to show you how I came up with my results, I would be happy to.
